OC MECCA Volunteer Service Program Santa Ana	Student interns will be creating a campaign for MECCA on trusting tap water. Interns will organize and facilitate community outreach and engagement efforts in order to gain feedback on tap water trust issues, and to educate community members about the benefits of tap water. Interns will also be participating in community listening workshops that engage and empower under-represented community members to be involved in watershed planning.	Santa Ana College, Orange Coast College, UCI, Fullerton College, CSU Fullerton, CSU Long Beach	Human services, business, social services, social sciences, general, teaching, social work, public administration, government	Open
Lake Elsinore White Paper and Strategic Plan	This will include identifying the strengths, weaknesses, opportunities, and threats related to the lake. This research will be used to create a summary of the overall state of Lake Elsinore and strategic alternatives for consideration by the City to achieve various objectives including: - Improving the overall health of Lake Elsinore, i.e. water quality concerns including algae blooms, fish die offs, dissolved oxygen declines and much more. - Identifying funding alternatives to generate a sustainable and reliable funding source to be used to leverage/pay for future improvements. - Studying projects to improve economic development opportunities on and around Lake Elsinore such as infrastructure projects and water quality improvements. - Explore partnership opportunities to further all goals at the Federal, State and Local level including private industry. - Develop proposed community outreach tactics to inform and engage with the community for support.	CSUSB, UCR	Environmental/Water Sciences, Communications, Political Science, Planning, Engineering	Open
Health & Nutrition Advocacy Intern Santa Ana	The intern(s) for this project will provide programmatic support to Padres en Acción (Parents in Action) which includes: active recess, health education, community assessments and engagement opportunities that support increasing water consumption. Water related activities consist of: healthy beverage demonstrations, blind water taste tests, coordinating school-wide water campaign activities, water quality education and leading assessments of water sources at designated school sites. Additionally, the intern(s) will have the opportunity to	Santa Ana College, Orange Coast College, UCI, Fullerton College, CSU Fullerton,	Health Science, Kinesiology, Human Services, Latino/a Studies, Liberal Arts, Communications & Political Science	Open

	participate in curriculum development, project management and outcome reporting. This project provides valuable experience in community engagement and hands-on workforce training in project management and community organizing. The intern(s) will gain a better understanding of community members and health initiatives that support stakeholders within the watershed community.	CSU Long Beach		
Waterwise Youth Program Instructor Montclair	The intern(s) will support CBWCD's cultural relevancy goals for its Waterwise Community Center. The Waterwise Community Center provides no cost field trips and bus reimbursements for over 5,500 K-12 students each year to explore, discover, and test the wonders of waterwise landscapes at the Center and its gardens. Over 75% of the K-12 students that participate in programming are on free and reduced lunch and attend schools that are located within the DAC communities in Ontario and Montclair. The school districts that the Center serves are composed of 30-40% English Language Learners (ELLs). The cultural relevancy goals for the Waterwise Community Center is to ensure that the youth education programming is inclusive and accessible for English Language Learners youth, their parents, and the chaperones that attend the youth education programs. The intern(s) will assist with water conservation education instruction in the youth education programs and will test and evaluate strategies to ensure that programming is inclusive to all learners. Goals for the projects including building regional capacity for inclusive and culturally competent watershed literacy and outdoor learning integration into formal K-12 settings, and to provide training and experiences for pre-service teachers that offers exposure to multiple grade levels, school cultures, class sizes and increased competency with ecology/watershed concepts and Next Generation Science Standards Science and Engineering Practices.	CSUSB, Pomona, MSJC	Education & Environmental Science	Open
Hydration Education Anaheim	Caterina's Club is asking the program to send interns for our Hydration Education to our underserved populations we are currently serving. This is something that our clients have had little to no exposure to. The interns could create age appropriate	Mostly Orange County	No preference	Open

	materials for ages 6-18. Our main demographic however is between the ages of 8-14 however. This would be a great opportunity to bring awareness of several issues concerning water in several aspects outside of the usual water conservation that saturates mainstream water education.			
Water Conservation Intern Huntington Beach	Focus on Water Conservation : - Incorporate instructional activities up to three times a seminar to educate the students about the importance of water conservation and responsible water usage. - Invite up to 2 guest speakers to come in during our Study Hall sessions to discuss the importance of water conservation during the semester - Have a work shop about plastic pollution - Then have intern lead and incorporate a beach clean up day after the workshop about plastic pollution - Have intern make and fill out surveys of mentees and their families about how often they use water (watering lawn, showering, wash clothes) and provide suggestions for mentees and their families on ways to conserve water (that would benefit the community but also help with their water bill) - Something Project MotiVATe can implement internally permanently is to implement a bring your own cup policy to Study Hall -Incorporate parents engagement by educating them every couple of weeks on why we are implementing these changes within Study Hall -Intern can help Project MotiVATe put together a game plan on how mentees and mentors can make the most use of their water supply during the 4 day summer camp every year. This year we actually implemented every one must bring their own cup to camp so we cut back on paper and styrofoam cups immensely	CSULB, CSUF, UCI, Golden West, OCC, Fullerton College	Asian and Asian American Studies, Psychology, Sociology, Human Development, History, English, Geography, Economics, Environmental Science & Public Policy, and Journalism & Public Relations a plus. But all majors are welcome!	Open
Residential Landscape Projects Inland Empire	DIY, multi-benefit, residential landscape projects - In this project interns will develop resources that provide new information to the public on relatively low-cost and simple do-it-yourself ways of designing and installing watershed friendly, multi-benefit, residential-scale landscapes. This will include both digital and print informational materials, and digital work that will improve CBWCD's no-cost residential design assistance program. These materials will address information we have been requested by the public that is not available in other informational materials	CPP, MSAC, Chaffey	Landscape Architecture Horticulture Plant Science	Open

	<p>created for the region, adding to the body of available landscape transformation resources. These materials will be available online and distributed at our Waterwise Community Center, open to the public and located in an underserved community. Working with CBWCD staff, interns will produce detailed guides to DIY landscape project costs and time investment and detailed step-by-step guides to aspects of DIY projects including irrigation installation, planning for maximum landscape value on a budget, and detailed planting design. Planting design related materials will also facilitate the ability for the vocational horticulture program at Valley View High School to teach landscape design to its students, requested of CBWCD. Valley View is a continuation school in Ontario which serves an underserved community. Finally, interns will contribute to a specialized “plant library” of regionally adapted plants for use the with low-cost and simple to use landscape design software used by CBWCD and to be used by Valley View High School for its design curriculum.</p>			
<p>BAM Landscape Project Mira Loma</p>	<p>BAM landscape Project - BAM is a pilot project that JCSD and Western are running to provide JCSD residents, which includes approximately 28% DAC, to develop and/or maintain an attractive and healthy drought tolerant landscape. JCSD will undertake this project primarily because it will reach residents (DAC) that is reluctant to take advantage of programs and rebates for water wise improvements. Additionally, these residents are still "early adopters" and can serve as ambassadors for a water wise landscape. Ideally, they will save water while transforming their lawns. 1. Visit each completed landscape to take pictures. 2. Complete a survey with the resident. 3. Create a folder with before and after pictures for each address. 4. Create a simple excel sheet for each address with before and after water savings. 5. Create a presentation for the JCSD Board of Directors. There may be other components the staff has not thought of but may adjust to accommodate changes that arise. This information will allow staff to make a more informed decision on additional, future projects.</p>	<p>Pending</p>	<p>Water Resource Management. Orange County Encampments along the Santa Ana Riverbed: Access to Water Santa Ana	Interns will survey homeless encampment residents on questions related to water access and strategies, interns will also assist in water and soil testing, analysis of survey and testing results, and development of policy and advocacy campaigns in relation to homelessness and water.	UCI	Anthropology, applied archeology, communications, geography, environmental studies, earth and environmental sciences, health science/human ecology, nursing, philosophy, social work, sociology	Filled
WECAN Turf Replacement Satisfaction Survey Mira Loma	Approximately 28 percent of JCSD households qualify as disadvantaged. JCSD undertook this project primarily because it will reach a group of residents (DAC) that is reluctant to take advantage of programs and rebates. Additionally, these residents are still "early adopters" and can serve as ambassadors for a native landscape. Ideally, they will save water also but landscape transformations of 1,000 square feet are too small to really gauge water savings. With over 100 completed projects, staff is interested in gauging how satisfied residents are with their landscapes now. Interns will: 1. Visit each completed landscape to take pictures. 2. Complete a survey with the resident. 3. Create a folder with before and after pictures for each address. 4. Create a simple excel sheet for each address with before and after water-use. 5. Create a presentation for the JCSD Board of Directors. There may be other components staff has not thought of but adjustments can be made to accommodate changes as they arise. This information will allow staff to make a more informed decision on additional future projects. Orange County Community Water Project Costa Mesa	The Orange County Community Water Project directly involves the community in water issues through outreach activities tailored to the needs of specific communities. These activities will include presentations, field trips, community events, water monitoring cover basic water issues including water supply, governance, quality, conservation, recycling and desalination and wastewater. The events will be focused on underserved communities throughout Orange County. Multiple languages and will be used based on the needs of the community. The goal of the events is to inform the community on water issues of direct concern to them and show them how they can become involved	UCI, CSULB, CSUF	Geography, Biology, Geology, Economics, Chemistry, Engineering, Business, Government/Political Science, Communications, Economics, Psychology	Filled

	<p>in the decisions made regarding water in their communities. Local water officials will be invited to attend the events so that the community members can meet them and directly ask questions. Attendees will be informed of upcoming water related meetings in their area and how they can attend and participate. Interns will work as community liaisons, identifying and communicating with community members to identify issues of concern in the community and making connections to resources and decision makers.</p>			
Clean Camp Coalition	<p>This work will help serve a disadvantaged population within the watershed while improving water quality. Currently, there is significant waste throughout homeless encampments within the Santa Ana Watershed. This project will engage and partner with community members, as well as the City of Riverside, Santa Ana River Trust in organizing cleanups and trash pickups on a weekly basis in order to reduce the accumulation of waste and toxic substances in the river and living space of the homeless. Interns will be responsible for development and implementation of the project.</p>	CSUSB, UCR	<p>Open to All Majors International Relations Political Science/Studies Public Policy Urban Design Agriculture Biology Geology Chemistry Environmental Science/Studies Law</p>	Filled

	<p>climate resilience. The intern will assist with developing outreach strategies to engage diverse perspectives from these communities to inventory existing conditions and identify needs, develop GIS support tools, and work with community stakeholders to develop public interpretation signage templates, content development guidelines, and public education programming resources.</p>			
<p>Santa Ana Watershed Community Water Ethnography Project Irvine</p>	<p>Based on a sampling from community groups (agency representatives, elected officials, mutual water companies, representatives of underserved and underrepresented communities, and tribal communities) within the Santa Ana River Watershed, this study will collect, analyze, and report community members' narratives of local water-related strengths, needs, and opportunities. Investigators from CSU San Bernardino and UC Irvine will conduct ethnographic interviews and follow up surveys with representatives of underserved and underrepresented communities within the watershed.</p>	<p>UCI</p>	<p>Anthropology, Sociology, Public Health, Public Policy, International Studies, Environmental Studies, and related majors</p>	<p>Filled</p>
<p>Shower Plus Ministry Internship Garden Grove</p>	<p>The project provides interns with the opportunity to work with extremely low-income individuals and people experiencing homelessness without access to water for hygiene and bathing. Every Tuesday and Thursday from 6:00 am to Noon, the First Presbyterian Church of Garden Grove allows participants to use its shower facilities. The program provides towels and toiletries for participants. One part-time paid Program Coordinator manages the program with volunteers from the church and community. Other program services include: US Mail, hot breakfast, free clothing, and reading materials. Mental health professionals from the County of Orange Behavioral Health Outreach provide intake and ongoing case management services to eligible individuals. The Program Coordinator assists individuals with referrals to mainstream public benefits and other referral services such as Veteran Services, Permanent Supportive Housing Programs, and the Orange County Homeless Court.</p>	<p>CSUF, CSULB</p>	<p>Psychology, Sociology, Human Services, Urban Planning, Public Policy, and Political Science</p>	<p>Filled</p>

Showers for Homeless Youth Redlands	In the city of Redlands there are 200 plus homeless adults and over 1200 homeless young people between grades 7-12. Our mission is to provide a mobile shower unit which will be located at different places in Redlands and which will provide a weekly shower for members of the homeless community. Our goal is to provide them with a shower, clean clothes. Grooming and the possibility of beginning skills training to help them take the first steps to get off the streets and into a meaningful future. It is especially important for the homeless young people to be clean and feel a part of the school experience like their peers without being criticized for their physical condition. We will be working with youth hope and Redlands family services in providing the shower experience on their properties.	Crafton, SBVC, CSUSB, UCR	No specific majors are identified.	Filled
Public Health Intern Fullerton & Riverside	The primary objective of this project is to characterize water quality issues among disadvantaged communities located within the Santa Ana River Watershed. This project will use gene-specific markers of fecal contamination, microbial community profiles, land use patterns, and water quality parameters to identify major sources of pollution within a section of the Santa Ana River located in Riverside, CA. Our sampling locations will consist of several points along the Santa Ana River between Van Buren Blvd and Mission Inn Ave. Our goal is to characterize the risk to public health among disadvantaged communities that use the Santa Ana River for recreation or other beneficial uses. We plan to determine the effectiveness of gene-specific markers of fecal contamination for this portion of the Santa Ana River and develop microbial community profiles as a potential indicator for pollution sources. This project aligns with the Call for Projects because it is designed to connect students with disadvantaged communities using applied environmental microbiology research. Students will gain experience in sample collection, advanced laboratory procedures and data analysis. Students will also learn through direct experience how disadvantaged communities may be disproportionately impacted by elevated microbial risk environments due to the activities that take place in the Santa Ana River.
