The educational sessions will help city policymakers, planners and facility managers understand techniques that REDUCE water demand, REDUCE non-point runoff, and DECREASE local flooding in new developments and redevelopments.

Mulch and compost can increase soil quality enhance fertility and water percolation and protect from soil compaction.

High-efficiency irrigation systems with Smart Controllers reduce water demand.

Drought-tolerant and native habitat gardens conserve water and protect native habitats. The use of cool season turf can be minimized.
