Project Title: Ten years in the Upper Santa Ana Watershed

Project Description:

In order to understand the interconnectivity of the natural processes and public policy decisions in the Santa Ana Watershed over the last decade and relate them to the general public interested in these issues, the intern will examine internal Water Resources Institute files for archival information about presentations, conferences and special events about the watershed that have taken place under the auspices of the WRI since its inception. Additionally, the intern will interview faculty researchers about their specific Santa Ana Watershed research and activities in conjunction or partnership with the WRI at Cal State San Bernardino. These interviews will detail:

- the researcher;
- the study questions posed
- the results;
- the funding provided for the research

With this information, the intern will prepare a paper detailing the academic and public policy activities sponsored by the WRI and Cal State San Bernardino in the Santa Ana Watershed. This paper will serve as the basis of an informational booklet to be made available to the public at events sponsored by the WRI and its partners.
